Expand Your Business with Infrared Wellness

AVANT™ by FIT Bodywrap®

THE WELLNESS category continues to grow, and today's clients are looking for more than traditional spa or tanning services alone. They are asking for treatments that support detoxification, pain relief, fat reduction, recovery, and overall well-being.

From infrared body wraps to red light and cryotherapy, adding wellness services allows tanning salons and studios to expand their offerings, reach new clients, offset seasonality, and increase revenue without significantly increasing overhead.

At FIT Bodywrap®, the focus is on creating practical, commercial-grade wellness solutions that help businesses grow while delivering real value to clients.

NEXT-GENERATION INFRARED THERAPY

AVANT™ is FIT Bodywrap's most advanced infrared system, developed through years of research and designed to fit seamlessly into busy salon environments.

Unlike traditional infrared saunas that heat the air around the body, AVANT™ delivers infrared directly to the client. This approach allows for deeper penetration, faster heat absorption, and a more immersive experience overall.

Each AVANT™ session is designed as a consistent 30-minute treatment, making it easy for staff to schedule, operate, and maximize daily room usage. During the session, infrared light therapy helps raise core temperature and increase circulation, simulating the effects of cardiovascular exercise. Clients report benefits such as detoxification, pain relief, weight management, muscle recovery, and deep relaxation.

The wellness benefits associated with AVANT™ are supported by FIT Bodywrap® white papers, which outline the effects of infrared light therapy on circulation, detoxification, recovery, and overall wellness. These educational resources help businesses confidently communicate the value of infrared therapy to their clients.

THE AVANT™ ADVANTAGE

- **Predictable 30-Minute Sessions**

AVANT™ is designed around a standardized 30-minute treatment, allowing businesses to schedule efficiently and increase daily treatment volume.

- **Infrared Modality Designed for Results**

Because infrared energy is applied directly to the body rather than heating ambient air like a sauna, clients can experience effective infrared therapy without the intense heat associated with traditional sauna sessions.

- **T-Max Compatibility**

Using our Universal Timer Cord, the AVANT™ is a direct connect to T-Max timing systems, keeping operations simple and familiar for staff.

- **Fast Heat-Up**

The system reaches operating temperature in approximately five minutes, reducing downtime between sessions and allowing for faster room turnover.

- **Strong Revenue Potential with Low Overhead**

With a starting price of $3,495, AVANT™ offers one of the most accessible entry points into wellness, allowing businesses to add a high-demand service without a long or risky payback period.

- **Built for Daily Commercial Use**

With durable construction and a plug-and-play design, AVANT™ is engineered for reliability and ease of maintenance.

- **Clean, Space-Saving Design**

Thoughtful cable management and a modern profile help AVANT™ blend into existing treatment rooms while enhancing the overall look of the space.
